

Experience a more comfortable wax with

Berodin

Removes hair efficiently and gently with exceptional results

Advanced formulations, using the highest quality ingredients

Does it hurt?

The first time it hurts more than any other time. If you wax regularly you are removing less hair each time. Please do not wait longer than 4 weeks, regardless of how your hair growth appears. If you wait too long it will be like your first wax all over again.

Will the hair grow back thicker/stronger/darker?

When hair is shaved, it is cut off at the thick part of the hair, which is why you can feel stubble the next day. A properly waxed hair is removed from the root and when the hair starts to grow back it is a new hair, very fine at the tip, so no stubble. The only things that stimulate hair growth are hormones, natural or artificial.

Ask your salon about a more comfortable waxing experience with Berodin and book your appointment today!

WAXING AFTERCARE ADVICE

Thank you for choosing us for your waxing service.

Please note that everyone reacts differently to waxing. Discomfort, redness and small bumps are common and usually subside over a period of 24-48 hours and tend to diminish with each wax you have. Should you experience persistent symptoms, or if you have any questions, please do not hesitate to contact us.

You may notice hair growth after a week or so. It can take 4-5 wax treatments to get your hair on a growth cycle that gives best results. To experience maximum benefits from waxing, please do not shave or use any other form of hair removal between appointments as this will interrupt the hair growth cycle and encourage uneven hair growth. This may seem like an eternity, but the long term results are worth short term annoyance! Hair needs to be a minimum of ½ cm long to be successfully removed by waxing.

In order to keep your skin in tip top condition we would ask that you follow the guidelines below for the next 24 hours:

- No tanning of any kind – sunbathing, sunbeds or spray tans
- No heat treatments – saunas, steam rooms, hot tubs, hot baths
- No exercise – gym, swimming, sports
- Wear loose fitting clothing
- Avoid scratching or touching the waxed area with unwashed hands
- Avoid using any lotions, deodorants, body sprays or perfumes on the waxed area other than those recommended by your therapist

To prevent ingrown hairs:

- Apply an antiseptic cream to the treated area twice daily for the first 3 days following your wax, then once daily after that.
- Exfoliate lightly 2-3 times per week using an exfoliating mitt and liquid soap.
